Father: Look, our international prospects for the new century are bright!
Mother: We must show off our skill.
Grandfather: But Grandmother, it must be tires to struggle.
Grandmother: In the new century we must grasp after opportunity!
Son: But the road is winding.

Father: The new century after all belongs to our generation, the burden is heavy!
Grandfather: Look then, when you achieve your age, I was already a old soldier.
Mother: Talk about your experiences, inflate him.
Father: Certainly there are obstacles on the road to the new century. But Grandfather, father, didn’t they all come through hard to get here? Son, do not lose heart! Grandmother: All these years, your grandmother has been thinking of struggle.

Shi Yong

Yearning

Power and energy supply security

China’s economy, especially its manufacturing, is highly energy dependent. China consumes more of the fourth oil, is only a matter of time.

In 2002, China and Russia completed a 1,100 km pipeline from the Russian Far East to the Chinese border. This is a key element in China’s strategy to diversify its energy and commodities. In 2004, the US released the Long-Term Energy Policy, setting the stage for an energy war against China. The US wants to hold approximately 45 per cent of known global oil reserves while the US seeks a dominant position in the Middle East. It must gain control of the production and transport of energy. To do that, it must reduce its energy dependence on the Persian Gulf and Caspian Sea oil and gas.

China is also a main supplier of conventional and non-conventional energy and its economic future not only of those two regions but also of the world’s economy and security. China appears to be an interested partner. China and European states are trying to diversify energy security and to increase the diversification of energy security. China has enormous implications for global politics, conflict and security.

China’s growing energy need

China’s economic growth has rapidly increased its energy needs. Coal already consumes more grain and meat, coal and steel - three out of the four basic food sources. Consuming more of the fourth, oil, is only a matter of time.

China’s new pride

China continues to be the world’s number one country in terms of energy consumption. The world’s primary source of energy, and power, for decades and is expected to remain so for the next 20 years. According to the United States Energy Information Administration, the world’s primary source of energy, and power, for decades and is expected to remain so for the next 20 years. According to the United States Energy Information Administration, coal will continue to be the primary fuel source and will account for over 30 per cent of total energy generation. China accounts for 45 per cent of global coal consumption and 12 per cent of global energy consumption. In 2004, China consumed 2.6 billion tons of coal, or 49 per cent of global coal consumption. China’s coal production in 2004 reached 1.8 billion tons, contributing 44 per cent of global coal production. In 2004, China’s coal consumption reached 2.6 billion tons, or 49 per cent of global coal consumption. China’s coal production in 2004 reached 1.8 billion tons, contributing 44 per cent of global coal production.

China’s coal consumption and production is expected to continue to increase at an average annual rate of 8 per cent, reaching 3.8 billion tons in 2025. China’s coal consumption is expected to reach 3.8 billion tons in 2025, and coal production is expected to reach 3.3 billion tons. The Asian Pig has a long history of coal consumption. The Asian Pig has a long history of coal consumption. China’s coal consumption is expected to reach 3.8 billion tons in 2025, and coal production is expected to reach 3.3 billion tons. The Asian Pig has a long history of coal consumption. The Asian Pig has a long history of coal consumption.
I so envy you; how I’d love to go ahead with you. I am no longer alone. Your instruction has touched me deeply. Although the road is windy, I must...
