

From Vaidyam to Kerala Ayurveda

The transformation of *yurveda* under the influence of modernity, as it unfolded in the last century in the south western Indian state of Kerala, has been the subject of several studies. These studies focus mainly on the twin processes of institutionalisation and modernization, and stress the exemplary leadership of P.S. Varier and the cultural and political influence of his institution: the Arya Vaidya Sala, situated in Kottakkal in North Kerala. (fig. 1) Varier and his institutions symbolise modernity marked by scientific temper, technological innovation and entrepreneurship. They are emblematic of the cultural transformation of *vaidyam* [medicine], a formation of interrelated indigenous medical knowledge, into a unified regional medicine, currently known as Kerala Ayurveda.

The making of Kerala Ayurveda

Several socio-political conditions that emerged in the wake of colonialism prepared the ground for this transformation. They include spread of modern education and a print culture, introduction of technology, emergence of new governance systems and more importantly, the rise of social and democratic movements that challenged dominant power structures. This paper discusses some of these factors briefly and highlights the contributions of socio-political struggles by subordinate castes and classes, since the early twentieth century, in institutionalising *vaidyam* into Kerala Ayurveda.

Until a few decades ago, the term 'vaidyam' encompassed all traditions of indigenous medicine in the Kerala region. *Vaidyans* were learned practitioners of one or more *vaidyam* traditions such as, for example, *visha vaidyam* [treatments for poisonous bites] or *bala vaidyam* [treatments for children's ailments]. These *vaidyam* traditions were well established in the region when the Sanskrit textual tradition of *yurveda* arrived in the sixth and seventh century. Subsequently the term 'vaidyam' came to denote both the local traditions as well as Sanskrit *yurveda*. However, unlike elsewhere in India, a separate caste of *vaidyas* [*yurvedic* physicians] did not emerge and the various strands of *vaidyam* became the domain of specific castes and occupational groups.

Despite their lower ritual and social status among other Brahmin communities the Brahmin *ashtavaidyans* [lit. eight families of Sanskrit *vaidyas*] of southwest India enjoyed higher social status and political power than other medical practitioners, and staked claim to the canonical *yurvedic* tradition. However, textual traditions were also claimed

by subordinate castes such as the Ezhavas. The case of Itti Achuthan, scholar and a trained *vaidyan* from the Ezhava caste, who was one of the main authors of the 12 volume text 'Hortus Malabaricus' of the late 17th century certainly was not an exception.¹ The *vaidyam* tradition incorporated both the Sanskrit *yurvedic* text *Ashtanghrudayam* as well as regional medical texts such as *Sahasrayogam* and *Chikitanjanari*. Similarly, use of plant based decoctions and medicated oils, and therapeutic techniques such as *Dhara*, *Pizhichil*, *Nhavarakizhi*, *Sirovasti*, which belonged to the local *vaidyam* traditions, became part of the *yurvedic* *pancakarma* procedures. (fig. 2)

Though Hindu castes and *yurvedic* practice were related, the ties were not rigid, as the presence of Christian and Muslim *vaidyans* testify. However, while the practice of *vaidyam* transcended class-caste-community boundaries to some extent, it remained strictly gendered. *Vaidyam* was exclusively a male profession. Only midwifery was conceded to women, of deprived castes and classes.

Towards the end of the colonial era the social configurations of medical practice in southwest India began to change. This was mainly due to socio-political changes under colonialism and nationalist responses to colonial medical policies that discriminated against indigenous medicines. The solution envisaged was institutionalisation of a standardized *yurveda* at the national level, forcing reconstitution of regional *vaidyam* traditions. The emergence of the regional form of 'Kerala Ayurveda' exemplifies such a re-articulation.² Kerala Ayurveda is the legitimate *yurvedic* form that was created out of the heterogeneous *vaidyam*, which was delegitimized

in the process of building a pan-Indian *yurveda*, in tune with the national identity. The institutionalisation of this new identity led to the decline of the various specialist traditions within *vaidyam*, reducing their status to that of 'folk medicine'. Although occasionally people seek out the rare expert *vaidyan* and recall legendary tales of *vaidyans*, the title 'vaidyan' has lost its social and cultural significance. These transformations represent not only the erosion of indigenous medical knowledge, but also changes in the social profile of traditional medical practitioners under the influence of colonial and postcolonial modernity.

Medicine, modernity and societal responses

Modernity in early twentieth century southwest India was characterised by an expansion of literacy and modern education, spread of social reforms, and mobilisation for political rights involving various castes and classes. A print culture assisted by publishing quickened its pace and created new public spheres for the expression of ideas both old and new. *Vaidyam*, with its epistemology rooted in empiricist philosophies of Hinduism and Buddhism, influenced by Tantrism and astrology, having codified texts, and its practices structured by caste, class and gender divides,

The
sum of the parts
does not result
in the whole.

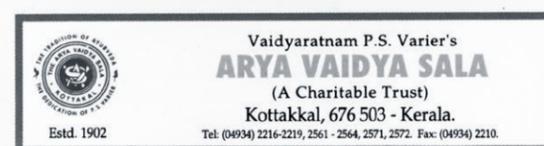

As
practitioners
of Ayurveda,
we wholly
agree.

The philosophy of holism believes in a way of life that is integrative. Where man is but a part of nature.

And harmony, the essence of life.

Which is exactly what we have been emulating, as authentic practitioners of Ayurveda, ever since our inception over 90 years ago. Treating and curing countless patients, from around the globe. With an approach to medicine, and life, that is wholly holistic.

Because the principles of Ayurveda are but the philosophy of holism, in practice!

Ayurveda - The Authentic Way.

Revisiting the Kerala Ayurvedic sector

This note attempts to critique Kerala's priorities with regards to the Ayurvedic sector by revisiting the latest developments: the merging of traditional Ayurvedic firms with Indian and global companies; the promotion of a 'Kerala brand' of Ayurvedic industrial medicines in the form of a public-private consortium named CArE-Keralam; and the promotion of health-tourism and related industries. It can be argued that the market-centred promotion of Ayurveda leads to a 'pharmaceutical vicious circle', i.e., the commercialization of Ayurveda leads to more of the same. This will hinder the promotion of Ayurveda in public health and divert funds needed for innovative Ayurvedic research. I appeal for a different approach that has Ayurvedic therapies and medicines for specific diseases as its main focus.

Harilal Madhavan

The corporatization of Ayurveda

Industrial production of Ayurvedic medicines was the main response by Kerala's Ayurvedic sector to challenges such as the increasing demand for Ayurvedic medicines, the decreasing

quality of manual production, and most importantly, the tough competition from the biomedical pharmaceutical industry.¹ Since independence, government policies have aimed at stimulating Ayurveda's industrialization, and in addition,

bio-prospecting in areas such as pharmaceuticals, dietary supplements, cosmetics and other healthcare applications, shows the interest of global industries in exploiting traditional knowledge systems such as Ayurveda. Modern biomedical paradigms of quality control and drug formulation have shaped nationally and regionally based Ayurvedic industries.² Over the last few decades, Ayurvedic companies have increasingly marketed medical products for the treatment of 'lifestyle diseases', such as diabetics, osteoporosis, asthma, obesity and also a large number of food supplements, cosmetics and other herbal derivatives, including immunity boosters and aphrodisiacs.

However, in Kerala the Ayurvedic industry mainly produces medicines for the treatment of diseases, and not the cosmetics and nutraceuticals that make up a large part of the production of Ayurvedic manufacturers in other Indian states. In Kerala, there is also a fairly good Ayurvedic public health system. Ayurvedic outpatient facilities are more popular among the public than Kerala's biomedical public health facilities. State patronage before and after independence explains, at least partly, the favourable condition of Ayurveda in Kerala.³

An important development is the interest of industrial conglomerates in the brand name 'Kerala Ayurveda', which has led to mergers with Keralean Ayurvedic companies. It appears that the main intention of these mergers is not to establish Ayurvedic health centres, but to enter the business of Ayurvedic health-tourism. Many companies are looking to tap

Socio-cultural transformation of a regional medicine

was drawn into the various currents of modernity and political and institutional mobilisation in complex ways. The dominant view tends to erase the significance of medical reforms initiated by various subordinated social groups through their individual and collective action. In the following section I briefly discuss four constituting developments and pay special attention to political mobilisations as an important formative factor in the re-articulation of indigenous medicine in Kerala.

1. Commercial production

When opportunities arose for commercial production, a number of practitioners across castes and communities came forward and made their unique family medical recipes commercially available and marketed them under their family name. Along with medicines from classical texts, formulations from local texts were also produced and marketed as Ayurvedic medicines, catering mainly to a local clientele. Rather than homogenisation, the nascent Ayurvedic industry witnessed a process of diversification with multiple players and products.

2. Print culture

The proliferation of Indian medical literature shows the heightened literary activity among vaidyans. By the middle of the 19th century, among books on various subjects published in the local language of Malayalam, books on Ayurveda formed the largest subject category. Many vaidyans converted their personal/family manuscripts into printed books, produced their own commentaries and Malayalam translations of Sanskrit texts, and published autobiographical accounts. Ezhava vaidyans made significant contributions to the vast and heterogeneous body of medical literature. By the early decades of the twentieth century southwest India saw many medical journals devoted to traditional medicine such as Danwantari, Vaidyamanjari, Ayurveda and others. These journals published scholarly articles, written by a wide variety of vaidyans, on medical theory and practice, and political discussions on the future of their medicine.

3. Training institutions

Medical schools to train vaidyans were established in southwest India several decades before the first biomedical college was established in the region in 1952. The first modern institution to train vaidyans in Kerala was established in 1890 in response to the request made by the court vaidyan of Travancore state.³ Between 1918 and 1939 six new schools were started with grants from the princely state of Travancore and by 1940 there were eleven such institutes training vaidyans. Graduates of these schools were employed in the state dispensaries or received grants to set up their own clinics. The princely state of Cochin established an Ayurvedic college in 1914 and extended grants to vaidyans. In contrast, token support was offered by the British state in the Malabar region. However, the state support for vaidyam later declined as the newly established institutions of western biomedicine began to claim a larger share of state funds.

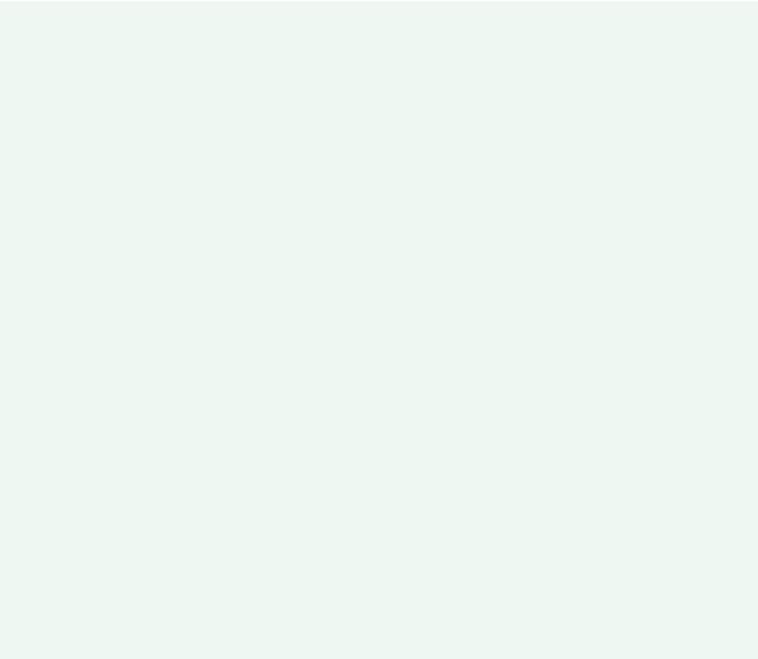

Fig. 1 (left): advertisement of the Arya Vaidya Sala.

Fig. 2 (above): Kerala Ayurveda treatment room.

4. Political mobilisation

The support extended by the princely states and the discriminatory policies of the colonial state prompted the political organisation of vaidyans. In 1902 before the formation of the National Ayurvedic Congress in 1907 the Ayurveda Samajam was established in Kerala. The activities of other organisations such as the Uttara Kerala Vaidya Samajam and Ayurveda Mahamandalam also inspired vaidyans to establish clinics, dispensaries and training schools, thus producing a vibrant Ayurvedic movement in Kerala.

Democratic and reform movements

The political awakening and social reforms inspired especially by the social reformer Sree Narayana Guru, who challenged caste oppression in Kerala society, altered the thinking and practice of the Ezhava vaidyans.⁴ Narayana Guru, who practised vaidyam himself, encouraged its pursuit as a profession. Reforms targeted at the practice of Ezhava vaidyans who integrated *jyothisham* [astrology], *bhootavidya* [supernatural healing] and *mantravadam* [healing through chants] with medicine resulted in the separation of medicine and religion as distinct domains of healing. These internal reforms contributed to the secularisation and rationalisation of medicine, which was central to modern institution building.

Further, less known among the various influences on medical transformation is an impetus that came from a section of Ezhavas and other subordinate castes, inspired by the communist ideology. They mobilised and claimed political and institutional space for vaidyam within the modern structures of the postcolonial nation state. Although the first government Ayurvedic school started in 1890, Ezhavas and other sub-

ordinate castes, who had traditionally practised medicine, were permitted admission only in 1914, after prolonged protests.⁵ In 1939 they demonstrated against the newly formed Kerala University, which refused formal recognition of Ayurvedic colleges. The state-wide protest marches and hunger strikes received public support, which forced the university to finally recognise Ayurvedic academic departments. Political mobilisation involving both students and teachers continued against the repeated attempts to relocate the college from its spacious and central location to the outskirts of the city. The communists provided the leadership for these struggles. These struggles were efforts to institutionalise Ayurveda, by demanding parity in pay from state departments and bureaucratic systems, similar to that of western biomedicine. The Ayurvedic institutional development was part of the efforts of subordinate groups to democratise the governance structures of the newly established independent state by aligning it with the larger social and political struggles for equality.

Social reform movements and radical communist movements contributed, albeit in different ways, to the institutionalisation of vaidyam into Kerala Ayurveda. Unfortunately, both these movements failed to acknowledge the historical gender asymmetry in Ayurvedic practice and made no efforts to address women's exclusion in their struggles for social justice. The entry of women into the colleges of Ayurveda in large numbers became possible only much later, ironically, because of the lowering of Ayurveda's social status that was linked to the ascendancy and masculinisation of biomedicine. The current neo-liberal expansion of Ayurveda may alter the caste, class and gender configurations in Ayurvedic education and practice, and may undermine some of the gains made in the earlier era through broad-based egalitarian visions. Medical knowledge and practice will therefore continue to be important sites for social and political struggles.

Towards a pharmaceutical vicious circle?

into this increasing potential of Kerala in health tourism (31% growth in tourist arrivals in 2005). These new developments not only affect the scale of Ayurvedic drug production, but they also influence marketing strategies. Examples are the integration of Ayurveda in elite hospitals and Ayurvedic treatments being offered at the workplace to keep everyone healthy, fit and happy. Corporatization in the form of tertiary healthcare might increase the cost of healthcare due to the utilization of high-end medical technologies. Ayurveda's corporatization also has implications for the insurance industry. The Ayurvedic manufacturing association of Kerala has already requested to have Ayurveda included under insurance coverage. They argue that this will boost the growth of the industry and lower medical costs.⁴

A Kerala brand

There are over 750 small and medium enterprises engaged in the manufacturing and distribution of traditional Ayurvedic and herbal products in Kerala. These firms have expressed a need for communal facilities, such as quality control units, more advanced production technology and the introduction of a joint Kerala brand name for their products. The reason for this is the unhealthy competition among firms and the slowing down of their growth due to increasing production costs, shortage of quality raw materials, a lack of approved standardization procedures, and even unethical marketing and corrupt practices. A change in policy is necessary, which will take a non-conventional approach to promoting and developing the

It must be said that focusing on particular diseases – the so-called 'disease specialization approach' – is a far better strategy than concentrating on how to capture the global market.

sector. Efforts are being made to bring these small Ayurvedic manufacturers onto a common platform to initiate growth. Meetings have been held with Ayurvedic manufacturers, under the auspices of the Kerala infrastructure organization (KINFRA) and the industrial development organization (KSIDC). The parties have arrived at a consensus and intend to form a consortium with the objective of jointly promoting Kerala as a global destination for sourcing Ayurvedic products and services of internationally acceptable standards. This was achieved through the formation of a Special Purpose Vehicle (SPV), namely CARE-KERALAM (Confederation for Ayurvedic Renaissance-Keralam Pvt. Ltd) (p. 1 see p34). It is assumed that the turnover of the Ayurvedic industry in Kerala of 300-500 million US\$ can easily be doubled in size if proper quality control and Good Manufacturing Practices are adopted.

Besides the major firms like Pankajakasthuri, The Arya Vaidya Pharmacy, The Vaidyarathnam Oushadhasala, Nagarjuna, Sitaram, Sreedhareeyam, around 240 companies all over Kerala have joined the campaign, with a considerable share equity. To the total cost of 3.56 million US\$, Ayurvedic manufacturers contributed 0.2 million US\$. The consortium CARE-KERALAM wants to secure the supply of good raw materials, provide quality control, perform R&D, and market the brand Kerala Ayurveda. CARE-KERALAM will also work on the documentation of Ayurvedic products, which is a pre-requisite for marketing Ayurvedic products (as drugs) in foreign markets. As a first step, the consortium only selects generic Ayurvedic

formulations for branding, and its members receive a brand logo for their products. The organizational structure of this initiative is debatable as top-level decision making still lies with those with the largest share in the consortium.

Tourism promotion and privatization

According to the Kerala State Industrial Development Corporation (KSIDC), the tourism sector is the most profitable investment choice. Investments in Ayurvedic health resorts are especially profitable. KSIDC data shows that in 2009, around 54% of the total loans (1.4 million US\$) were diverted to the tourist industry, out of which around 82% went to tourist resorts where Ayurvedic products and treatments are popular. The promotion of Ayurveda in state health tourism started in 1994. Around that time the Kerala Tourism Development Corporation (KTDC) started Ayurvedic health centres in its premium properties, like Hotel Samudra in Kovalam, south of Kerala's capital Trivandrum. From then onwards there has been a conscious effort by the government to promote Kerala Ayurveda as part of tourist packages, through marketing and financial subsidies given to private resorts and other entities. In this way Kerala aims to contribute to the 34 billion US\$ Indian healthcare industry.⁵ Now most hotels and government guesthouses in Kerala, as well as the state's major biomedical hospitals, have an Ayurvedic wellness centre or a separate Ayurvedic wing.
